

HCJ Cosinus Slide armored joint with adjustable feet pad

Intended for applications such as, SOI (slab on insulation), topping slabs, grade beams, etc., we recommend using 4-5 adjustable feet pads per 8.53 LF (2.6m) section of joint. For further rigidity, the addition of L-Brackets can be added.

The tabs can factory ordered and welded onto the rebar weave. Or, these can be field welded onto the rebar weave.

PSCS recommends on-site tech support for first time HCJ installations.
